### TempAssure™ Drapery Linings R-Value Ratings Test Results

TempAssure™ Linings With Unlined Fabrics	Layers	% Improvement vs. Unlined Drapery
Fabric & Blackout	2	43%
Fabric & Outback Blackout	2	43%
Fabric & COCO Sateen Luxury Sateen	2	57%
Fabric & Classic Sateen Napped Sateen & Raised Fiber Combination	2	80%
Fabric & Heavyweight Interlining & Outback Blackout Interlining & Blackout	3	303%
Fabric & Heavyweight Interlining & COCO Sateen Interlining & Luxury Sateen	3	310%

- Identical drapery fabric used as face material for all tests
- Results are the average of three separate, but identical, independent laboratory tests performed on each combination above as required under ASTM-D 1518 Standards.

### Did You Know...

- Uncovered windows can cause as much as 40% of a home's energy loss.
- For maximum energy saving benefit, drapes should extend at least 4" past the window on all four sides.
- Select the TempAssure Lining Solution based on the type and weight of drapery fabric used, degree of light control needed, noise control, UV penetration and the position of the windows in the home.

To place an order for RM COCO linings or for more information, please contact customer service at 800.325.8025 ext. 2.

Fabrics for Living.  
Style for Life.

*Adding layers of enhancing TempAssure™ Linings will increase the R-Value as much as 300% over unlined drapes!*
